

PROJECT REPORT

Prepared by: J Jessica (25BOE10115)

Subject: Digital Literacy

University: VIT Bhopal

INTRODUCTION

Digital literacy is an important skill in today's world where technology is used in almost every aspect of education. Students use various digital tools for learning, communication, and collaboration. However, understanding how to use these tools responsibly is equally important.

This project focuses on developing awareness about digital platforms, communication, and online safety through different practical tasks.

TASK WISE CONTENTS

- **Task 1: Digital Literacy**

For this task, I used Canva to create an infographic on digital literacy. Canva is an easy-to-use design platform that provides templates, icons, and design elements, which helped me create an attractive and informative poster.

My infographic highlights important aspects of digital literacy such as understanding digital tools, maintaining online safety, and practicing professional behavior. I divided the content into sections like digital tools, safety tips, and responsible communication. I also used pictures and short points to make the information visually clear and easy to understand.

One interesting thing I found while creating this design was how information can be presented effectively using visuals instead of long text. However, I also found it slightly difficult to manage space and arrange all the content properly without making the design look crowded. Overall, this task improved my creativity and helped me understand how to communicate information visually.

- **Task 2: Digital Portfolio**

In this task, I created profiles on platforms such as GitHub, LinkedIn, and Kaggle. Each of these platforms serves a different purpose and helps in building a professional digital presence.

GitHub is mainly used for storing and sharing projects, LinkedIn is used for professional networking and showcasing skills, and Kaggle is used for learning and practicing in data-related fields. These platforms help students present their work and connect with others in their field.

Over the next four years, I plan to use these platforms to build my profile and improve my skills. I will upload my projects on GitHub, maintain a professional

profile on LinkedIn, and explore learning opportunities on Kaggle. This will help me in gaining knowledge, building confidence, and preparing for future career opportunities. Overall, this task helped me understand the importance of having a strong and honest digital presence.

- **Task 3: Platforms & Practice**

For this task, I used HackerRank and Google Forms. On HackerRank, I solved a basic programming problem, which helped me understand how coding platforms work. It also gave me an idea of how logic and problem-solving skills are applied in practice.

I also created a Google Form to design a quiz related to digital literacy. This helped me understand how forms can be used to collect responses and share information easily. I added multiple-choice and short-answer questions to make the quiz interactive.

These platforms will help me academically by improving my problem-solving skills and making it easier to create and share content. Coding platforms like HackerRank help in developing logical thinking, while tools like Google Forms are useful for surveys, quizzes, and academic work. Overall, this task helped me learn how digital platforms can be used effectively for learning and collaboration.

- **Task 4: Digital Communication**

A situation where poor digital communication can cause problems is when a student sends an email to a professor without proper format or respect. For example, writing a message like “Send notes fast” can create a negative impression and may be considered rude.

This can lead to misunderstandings and may affect the relationship between the student and the professor. In professional environments, communication plays a very important role, and poor communication can reduce opportunities.

This situation could be improved by using proper email etiquette, such as writing a clear subject line, using polite language, and maintaining a formal tone. A well-structured email shows respect and professionalism, which helps in creating a positive impression.

- **Task 5: Cyber Awareness Reflection**

While researching this topic, I was surprised to learn how common cyber threats like phishing are and how easily people can fall for them. Even when users are aware of such risks, they may still make mistakes due to urgency or lack of attention.

This made me realize that digital awareness is not just about knowing but also about being careful in real situations. One habit I will personally change is being more cautious before clicking on links or sharing any personal information online.

I will make sure to verify sources and think before taking any action on the internet. This task helped me understand the importance of being alert and responsible while using digital platforms.

CONCLUSION

This project helped me understand that digital literacy is not only about using tools but also about being responsible and aware. I learned the importance of communication, online safety, and maintaining a professional digital presence. These skills will help me in both academic and professional life.
